COGNITIVE CLASS

Assignment: Notebook for Peer Assignment

Introduction

Using this Python notebook you will:

1. Understand 3 Chicago datasets
2. Load the 3 datasets into 3 tables in a Db2 database
3. Execute SQL queries to answer assignment questions

Understand the datasets

To complete the assignment problems in this notebook you will be using three datasets that are available on the city of Chicago's Data Portal:

1. [Socioeconomic Indicators in Chicago](#)
2. [Chicago Public Schools](#)
3. [Chicago Crime Data](#)

1. Socioeconomic Indicators in Chicago

This dataset contains a selection of six socioeconomic indicators of public health significance and a "hardship index," for each Chicago community area, for the years 2008 – 2012.

For this assignment you will use a snapshot of this dataset which can be downloaded from: <https://ibm.box.com/shared/static/05c3415cbfbtfnr2fx4atenb2sd361ze.csv>

A detailed description of this dataset and the original dataset can be obtained from the Chicago Data Portal at: <https://data.cityofchicago.org/Health-Human-Services/Census-Data-Selected-socioeconomic-indicators-in-C/kn9c-c2s2>

2. Chicago Public Schools

This dataset shows all school level performance data used to create CPS School Report Cards for the 2011-2012 school year. This dataset is provided by the city of Chicago's Data Portal.

For this assignment you will use a snapshot of this dataset which can be downloaded from: <https://ibm.box.com/shared/static/f9gfvj1gjmoxzycdhplzt01qtz0s7ew7.csv>

A detailed description of this dataset and the original dataset can be obtained from the Chicago Data Portal at: <https://data.cityofchicago.org/Education/Chicago-Public-Schools-Progress-Report-Cards-2011-/9xs2-f89t>

3. Chicago Crime Data

This dataset reflects reported incidents of crime (with the exception of murders where data exists for each victim) that occurred in the City of Chicago from 2001 to present, minus the most recent seven days.

This dataset is quite large - over 1.5GB in size with over 6.5 million rows. For the purposes of this assignment we will use a much smaller sample of this dataset which can be downloaded from: <https://ibm.box.com/shared/static/svflyugsr9zbqy5bmowgswqemfpm1x7f.csv>

A detailed description of this dataset and the original dataset can be obtained from the Chicago Data Portal at: <https://data.cityofchicago.org/Public-Safety/Crimes-2001-to-present/ijzp-q8t2>

Download the datasets

In many cases the dataset to be analyzed is available as a .CSV (comma separated values) file, perhaps on the internet. Click on the links below to download and save the datasets (.CSV files):

1. **CENSUS_DATA:** <https://ibm.box.com/shared/static/05c3415cbfbtfnr2fx4atenb2sd361ze.csv>
2. **CHICAGO_PUBLIC_SCHOOLS** <https://ibm.box.com/shared/static/f9gfvj1gjmoxzycdhplzt01qtz0s7ew7.csv>
3. **CHICAGO_CRIME_DATA:** <https://ibm.box.com/shared/static/svflyugsr9zbqy5bmowgswqemfpm1x7f.csv>

NOTE: Ensure you have downloaded the datasets using the links above instead of directly from the Chicago Data Portal. The versions linked here are subsets of the original datasets and have some of the column names modified to be more database friendly which will make it easier to complete this assignment.

Store the datasets in database tables

To analyze the data using SQL, it first needs to be stored in the database.

While it is easier to read the dataset into a Pandas dataframe and then PERSIST it into the database as we saw in Week 3 Lab 3, it results in mapping to default datatypes which may not be optimal for SQL querying. For example a long textual field may map to a CLOB instead of a VARCHAR.

Therefore, **it is highly recommended to manually load the table using the database console LOAD tool, as indicated in Week 2 Lab 1 Part II.** The only difference with that lab is that in Step 5 of the instructions you will need to click on create "(+) New Table" and specify the name of the table you want to create and then click "Next".

IBM Db2 on Cloud

Storage: 89%

Discover

LOAD

Progress bar with 4 steps: 1. Prepare (checked), 2. Load (active), 3. Verify, 4. Clean up

SupportSupportSupportSupport

You are loading the file **Chicago_Public_Schools_-_Progress_Report_Cards_2011-2012.csv**

Select a load target

The screenshot shows the Snowflake interface for the 'QCM54853' schema. On the left, the 'Schema' panel lists 'QCM54853' (selected), 'ERRORSCHEMA', and 'ST_INFORMTN_SCHEMA'. The main area shows a list of tables: 'DEPARTMENTS', 'DOGS', and 'EMPLOYEES'. A red box labeled '1' highlights the '+ New Table' button. On the right, the 'Create a new Table' panel shows the table name 'SCHOOLS' (highlighted with a red box labeled '2') and a 'Create' button (highlighted with a red box labeled '3'). At the bottom right, there are 'Back' and 'Next' buttons, with 'Next' highlighted by a red box labeled '4'.

Now open the Db2 console, open the LOAD tool, Select / Drag the .CSV file for the first dataset, Next create a New Table, and then follow the steps on-screen instructions to load the data. Name the new tables as follows:

1. CENSUS_DATA
2. CHICAGO_PUBLIC_SCHOOLS
3. CHICAGO_CRIME_DATA

Connect to the database

Let us first load the SQL extension and establish a connection with the database

```
[ ]: %load_ext sql
```

In the next cell enter your db2 connection string. Recall you created Service Credentials for your Db2 instance in first lab in Week 3. From the **uri** field of your Db2 service credentials copy everything after db2:// (except the double quote at the end) and paste it in the cell below after ibm_db_sa://

The screenshot shows the IBM Cloud console interface. At the top, there's a navigation bar with 'IBM Cloud', 'Catalog', 'Docs', 'Support', 'Manage', and a search bar. Below this, the 'Manage' tab is selected for the 'Db2-fk' instance. The 'Service credentials' section shows 'Location: Dallas', 'Org: rsahuja@ca.ibm.com', and 'Space: dev'. The 'Connections' section is expanded, showing a table with configuration details. A red arrow points to the 'uri' field, which is highlighted with a red box. The 'uri' field contains the value 'db2://fbv7412d[REDACTED]@dashdb-txn-sbox-yp-dal09-03.services.dal.ibm.net:50000/BLUDB'. Other fields include 'host', 'jdbcurl', 'db', and 'dsn'.

```
[ ]: # Remember the connection string is of the format:
# %sql ibm_db_sa://my-username:my-password@my-hostname:my-port/my-db-name
# Enter the connection string for your Db2 on Cloud database instance below
%sql ibm_db_sa://
```

Problems

Now write and execute SQL queries to solve assignment problems

Problem 1

Find the total number of crimes recorded in the CRIME table

```
[ ]: # Rows in Crime table
```

Problem 2

Retrieve first 10 rows from the CRIME table

[]:

Problem 3

How many crimes involve an arrest?

[]:

Problem 4

Which unique types of crimes have been recorded at GAS STATION locations?

Did you know? IBM Watson Studio lets you build and deploy an AI solution, using the best of open source and IBM software and giving your team a single environment to work in. [Learn more here.](#)

[]:

Hint: Which column lists types of crimes e.g. THEFT?

Problem 5

In the CENUS_DATA table list all Community Areas whose names start with the letter 'B'.

[]:

Problem 6

Which schools in Community Areas 10 to 15 are healthy school certified?

```
[ ]: ...
```

Problem 7

What is the average school Safety Score?

```
[ ]:
```

Problem 8

List the top 5 Community Areas by average College Enrollment [number of students]

```
[ ]:
```

Problem 9

Use a sub-query to determine which Community Area has the least value for school Safety Score?

```
[ ]:
```

Problem 10

[Without using an explicit JOIN operator] Find the Per Capita Income of the Community Area which has a school Safety Score of 1.

```
[ ]:
```
